

Barents Shelf Palaeozoic Sedimentology and Reservoir Quality report Series

Bottom growth anhydrite

Anhydrite rosettes cemented by halite

Deep water subaqueous evaporites in intrashelf basin

Extreme desiccation of intrashelf basin; halite and sylvite

- Key well on the margins of the Nordkapp Basin, documenting facies and depositional cycles from the Ørn and Ulv Fms.
- Important cored section of evaporite facies
- Sedimentological studies, digital core logs, detailed microfacies, and diagenesis studies.
- GB £ 6,900.00
